
Saying you're the
“World's Best Processor”
is one thing.

Actually being the
“World's Best Processor”
is another.

The AMD Opteron™ processor continues to lead the industry in x86 dual-core performance.

Under the newest SPECcpu2006 benchmarks, AMD Opteron™ processors continue to set the standard in x86 dual-core processor performance—besting our competitor by up to 15%. We credit that to our superior native dual-core design, with its Direct Connect Architecture, DDR2 memory, and industry-leading performance-per-watt. All with a clear migration path to native Quad-Core. It's all proof positive that customer-centric innovation wins over hype.

SPECcpu2006 benchmarks clearly indicate the performance advantages of the AMD Opteron™ processor over the Xeon 5160.
